App Name:

- Ralphie's Plate

App Description

- Pulls the dining hall menu from Nutrislice and generates a meal based on your macro targets (protein, carbs, fat, calories) and what you're in the mood for (like "something spicy" or "comfort food").
- Students (maybe) can also sell unused swipes for about $6 instead of the $12 door price, with surge pricing based on demand. Feature: a swipe exchange where the adaptive prices are real market prices, and you can buy futures (lock in a price today for a swipe at a set date and time later).

Audience

- Students, mainly freshman, at CU Boulder who want to watch their macronutrients. Athletes especially would be interested. It's annoying to look at Nutrislice and check the macronutrients all the time, so now you can use the app to look at it for you.

Vision Statement

- For CU Boulder students who need to watch their macronutrient intake. CU MacroPlan is a meal planning app that plans out your meals for you without having to look at Nutrislice. Unlike Nutrislice itself, CU MacroPlan doesn't require you to look at individual food items for protein and carb intake.

Communication Plan

- We have created a Discord Server dedicated to this project, and will be using that to communicate.
